

Alegeti afirmatia corecta cu privire la teorema Kirchhoff 2 pentru retelele de condensatoare:

O a. De-a lungul unei bucle a unei retele de condensatoare electrice, suma algebrica a tensiunilor la bornele condensatoarelor este egala cu suma algebrica a tensiunilor electromotoare ale surselor din lungul aceleiasi bucle cu semn schimbat

b. De-a lungul unei bucle a unei retele de condensatoare electrice, suma algebrica a tensiunilor la bornele condensatoarelor la care se adauga suma algebrica a tensiunilor electromotoare ale surselor din lungul aceleiasi bucle este egala cu zero

c. De-a lungul unei bucle a unei retele de condensatoare electrice, suma algebrica a tensiunilor la bornele condensatoarelor este egala cu suma algebrica a tensiunilor electromotoare ale surselor de pe laturile aceleiasi bucle

Cum sunt orientate liniile campului electric intre armaturile condensatorului sferica

O a. Pe directie radiala, avand vectorul E perpendicular pe vectorul D

b. Pe directie radiala, avand vectorul E colinear cu vectorul D

c. Pe directie radiala, avand vectorul E colinear cu vectorul D

Alegeti expresiile corecte ale densitatii fortelor \mathbf{f}_{e} " si \mathbf{f}_{m} ":

 \bullet a. **f**e" = - 1/2 E² grad ε; **f**_m" = - 1/2 H² grad μ

O b. \mathbf{f}_e " = -1/2 B² grad μ; \mathbf{f}_m "= -1/2 H² grad ε

 \odot c. \mathbf{f}_{e} " = - 1/2 D^2 grad μ ; \mathbf{f}_{m} "= - 1/2 B^2 grad ϵ

 $Dacă\ \phi\ este\ defazajul\ tensiune-curent\ la\ bornele\ unui\ condensator,\ iar\ \delta\ unghiul\ complementar\ acestuia,\ factorul\ de\ pierderi\ dielectrice\ K\ este:$

 \bigcirc a. K = ε_r tgδ

 \bigcirc b. $K = \varepsilon_r tg \varphi$

 \bigcirc c. $K = \mu_r tg\delta$

Clear my choice
